

Revised from DPS-DR-7

The viewshed analysis is based on the pole heights and consequent elevations from three points along the proposed 115kV line. The green hatching represents the area that is potentially visible from these points. The actual area visible will vary from point to point and is subject to the presence of land cover, structures and topography.

All locations are approximate. For planning purposes.

GIS data obtained from VCGI/VGIS and VELCO. LandWorks does not guarantee the accuracy of this information.
